What is claimed is:

- 1. A polishing apparatus comprising:
- a top ring for holding a workpiece to be polished;
- 5 and
 - a polishing table movable relatively to said top ring, said polishing table having a polishing surface for polishing the workpiece held by said top ring;

wherein at least one of said top ring and said 10 polishing table reciprocates linearly in a first direction.

A polishing apparatus according to claim 1, further comprising a polishing liquid supply device for supplying a polishing liquid to said polishing surface.

15

3. A polishing apparatus according to claim 1, further comprising a dresser which reciprocates linearly in a second direction for dressing said polishing surface.

- 4. A polishing apparatus according to claim 3, wherein a plurality of said dressers are provided in combination with said top ring.
- A polishing apparatus according to claim 1,
 wherein said top ring reciprocates linearly in a third direction intersecting said first direction.

15

- A polishing apparatus according to claim 1, wherein said top ring is rotatable about its axis.
- 7. A polishing apparatus according to claim 1, 5 wherein said polishing surface has a groove formed therein for discharging a waste material from said polishing surface.
- 8. A polishing apparatus according to claim 1,
 wherein said polishing table has a plurality of polishing
 10 surfaces having different levels of coarseness.
 - 9. A polishing apparatus according to claim 1, further comprising a linear motor for reciprocating said at least one of said top ring and said polishing table linearly in said first direction.
 - 10. A polishing apparatus according to claim 1, wherein said polishing table is arranged to reciprocate linearly in said first direction, and supported by a linear quide under a fluid pressure.
